(57) Abstract

PURPOSE: To provide the document processor which can utilize plural script described languages.

CONSTITUTION: When an operator performs an operation A to a certain object 210 by using an instruction part 130, the execution of the operation A is reported to a control part 120, the control part 120 discriminates a script 220 exists or not, when the script 220 exists, the control part 120 discriminates whether that script 220 is described in the first or second script described language based on a language class 230, and the execution of the operation A is reported to a script analysis part 160 or 170 for the first or second language corresponding to the discriminated script described language. The script analysis part 160 or 170 for first or second language, to which the execution is reported, analyzes the script 220 (processing corresponding to the operation) and checks whether processing corresponding to the operation A is described or not and when that processing is described, the execution of described processing corresponding to the operation A is requested to a script execution part 150.
